A12. ADVANCED COMMUNICATIONS PACKAGE SERVICES*

12.1 GENERAL

12.1.1 APPLICABILITY

Advanced Communications Package (ACP) Services are a set of application programs that collect, store, and forward information generated by network switches.

12.1.2 TERRITORY

Within the SureWest Telephone exchange area as said area is defined on map filed as part of the tariff schedules. (T)

12.2 RATES

		<u>Monthly Rate</u>	<u>Non- Recurring Charge</u>	<u>RSOC</u>
12.2.1	ELECTRONIC DIRECTORY SERVICE:			
	(A) DATABASE			
	(1) First 100 Directory Entries	\$ 48.75	\$ 315.00	EDS100
	(2) Each Additional 100 Entries	9.55	140.00	EDS100A M112
	(B) DATABASE DIRECTORY ADMINISTRATION			
	(1) Customer	32.85	75.00	EDSDDA
	(2) Utility			
	(a) Directory Set-up	--	35.00	M113
	(b) Each Directory Entry	--	1.20	M114
	(C) LINE FEATURE PACKAGE			
	Includes Directory Query Display, Automatic Call Set-up, and Calling Name Display - Each line	0.35	--	EDSLFP

* Provided only to existing customers with services working as of the effective date of Cal. P.U.C. Decision 96-12-074.

** Non-Recurring Charge is not applicable when installed at the same time as initial EDS service.

A12. ADVANCED COMMUNICATIONS PACKAGE SERVICES*

12.3 SPECIAL CONDITIONS

12.3.1 AVAILABILITY

These services are only available where central office equipment and operating conditions permit.

12.3.2 FEATURE/SERVICE DESCRIPTIONS

The advance Communications Package (ACP) services continuously collects information from the network switches and stores it on the Application Processor (AP). The information collected is stored on hard disk to support periodic data retrieval and to provide data back-up. Data may be retained on the AP indefinitely, limited only by volume of information and the amount of configured disk storage capacity.

Information is forwarded by the ACP to data processing equipment of data terminals, provided by the customer, through a variety of feature interfaces. Customers can retrieve this information by direct output, remote polling, computer transfer, or magnetic tape.

(A) ELECTRONIC DIRECTORY SERVICE (EDS)

EDS is an ISDN associated service which provides customers with the ability to access an on-line directory stored on the AP for call and personnel information. Reports can be generated based on the directory data. The administrative portion of EDS includes report generation, maintenance, customizing of selected display screen, and the ability to collect and report EDS usage data. ISBN terminal equipment is required for certain EDS functions.

The EDS Client Terminal Session also allows the user to query, review, sort, and print the desired data base records. The directory furnishes such attributes as person's name, telephone number, location, organization, title, etc., as provided by the customer. Four (4) fields in the directory are available for customizing the directory.

* Provided only to existing customers with service as of the effective date of Cal. P.U.C. Decision 96-12-074.

A12. ADVANCED COMMUNICATIONS PACKAGE SERVICES*

12.3 SPECIAL CONDITIONS - (Cont'd)

12.3.2 FEATURE/SERVICE DESCRIPTIONS - (Cont'd)

(A) ELECTRONIC DIRECTORY SERVICE (EDS) - (Cont')

(1) Directory Query Display

Allows the user to query the electronic directory data base for a name using the keypad on an ISDN display set. The user can then generate an Autocall by depressing the appropriate button.

(2) Automatic Call Setup

Allows ISDN set users who can access EDS to place a call to the party shown on the set display by depressing the appropriate feature button. Autocall can also be initiated when a data terminal is used to access EDS.

(3) Calling Name Display

Provides the party's name with the telephone number to the called party. This feature is available to ISDN station users within the same business group. The ISDN station set must be capable of displaying 40 characters of alphanumeric information.

(B) CENTRALIZED MESSAGE DETAIL RECORDING (CMDR):

Provides a record, on terminal equipment located at the customer's premises, of calls originating private and originating public call records from Digital Business Service (DBS) station lines to locations outside the same DBS Group.

CMDR is not intended to be a provision of billing detail. Processing of message information will be performed by the customer at their expense.

Account Codes are a CMDR option which permit a station user to dial a series of digits which will appear in the CMDR record for the particular call. The Account Code can be used to a call where arrangements have been made to provide this capability, is at the discretion of the station user. Each customer's Account Code must contain the same number of digits, not to exceed twelve (12), and must not conflict with on-network code assignments.

* Provided only to existing customers with services as of the effective date of Cal. P.U.C. Decision 96-12-074.

12.3 SPECIAL CONDITIONS

12.3.2 FEATURE/SERVICE DESCRIPTIONS - (Cont'd)

(C) SIMPLIFIED MESSAGE SERVICE INTERFACE (SMSI):

Provides an interface between premise voice messaging systems and the switching office. The interface provides bidirectional protocol conversion from the 5ESS Switch to the existing 1A ESS Switch Simplified Message Service.

(1) Message Waiting Indicator

Allows the switch to inform a client that he/she has message(s) waiting. Message Waiting Indicator must be accompanied by a Call Forward arrangement. Two types of indicators can be provided.

(a) Audible

Provides an indication tone when the client goes off-hook.

(b) Visual

Allows the switch to activate/deactivate a message indicator lamp on a station set.

The Message Waiting Indicator feature is not applicable if the customer is subscribing to either: Central Office based Voice Mail services; and/or Customer Message Service System (CMSS).

* Provided only to existing customers with service as of the effective date of Cal. P.U.C. Decision 96-12-074.
